

Reapproval Vecom Marine "Cooltreat NCLT"

To whom it may concern:

Based upon the written statement and laboratory analyses, that the formulation of the coolant product has not been changed since the initial approval, we grant reapproval for the "Engine Coolant Chemicals, Nitrite Based" approved list for the above mentioned coolant product for use in Everllence four stroke medium speed engines.

This approval covers the following products:

Product Name	Code #
Cooltreat NCLT	VE-TREATCCLT-01 (Master Code #)

Only the above stated Master Code # and Code #(s) including rebrands have been issued and approved.

This approval is valid for five years (until April 2031) provided there are no changes in formulation. The approval needs to be prolonged after April 2031 according to the most current "Testing Procedure for Cooling Water Approval" at that time.

The Master Code # including any of the above stated Code #(s) may be withdrawn at Everllence sole discretion at any time if any of the following reasons apply: The coolant does not fulfill the inhibition as previously tested; the engine coolant's characteristics change during real-life engine operation regarding corrosion protection, the coolant formulation is proven to be the cause for an engine damage, any changes in the coolant formulation, increased temperatures (e.g. cylinder liner), engine technology outdates the coolant technology.

For reasons of completeness we emphasize that, in any case, the coolant Master Code # owner must take over the full warranty for the coolant formulation including all above stated Oil Code #(s) thereof and that are referenced and bound to the Master Code #.

Yours truly,

Everllence SE
